

Acri-Flow

Latex Paint Reducer/Enhancer

When you add Acri-flow to paint, you increase that paint's durability and chemical properties, allowing ordinary paint to become "Super Paint!"

Acri-Flow is a special acrylic polymer resin that, when added to any water base paint, Acri-Flow increases that paint's flow properties and durability. Ordinary water-base latex and acrylic paints can now be reduced for better brushing and leveling, while increasing the paint's chemical properties.

Your paint will now last longer, be far more durable and apply much easier. Thinning latex paints with water reduces their durability; use Acri-Flow to make your paint last longer and apply smooth and easy!

Acri-Flow is ideal for faux finishes.

Cleans up with soap and water.
